This document provides an introduction to R Markdown, argues for its benefits, and presents a sample manuscript template intended for an academic audience. I include basic syntax to R Markdown and a minimal working example of how the analysis itself can be conducted within R with the `knitr` package.

Introduction

Academic workflow, certainly in political science, is at a crossroads.
Almost forgot about creating a footnote.[1] This will do it again.[2]
Want to cite something?

- Find your biblatexkey in your bib file.
- Put an @ before it, like **?**, or whatever it is.
- **?** creates an in-text citation (e.g. Smith (1984) says…)
- **(?)** creates a parenthetical citation (Smith, 1984)

That'll also automatically create a reference list at the end of the document.
